

## **Clevest hosts Multispeak® Technical Conference in Greater Vancouver, Canada**

**Richmond, BC, 19-Jul-10**– Clevest Solutions Inc., a leader in Smart Grid Deployment and Post Deployment maintenance software and provider of Mobile Field Force optimization solutions, is the proud host to the summer Technical Committee Meeting of Multispeak.

The MultiSpeak® Initiative is a collaboration of the NRECA, leading software vendors supplying the utility market. The Initiative has developed and continues to expand a specification that defines standardized interfaces among software applications commonly used by utilities. The MultiSpeak® specification defines what data need to be exchanged between software applications in order to support the business processes. To serve the best interest of utilities, leading software providers joined forces to support the Multispeak Initiative.

“We are proud to be hosts to such a great event”, said Arthur Lo, CTO & VP of Clevest Solutions. “Multispeak is an important initiative as it offers standardized interfaces to our customers, hereby providing them a wider range of vendor solutions at a lower cost of integration and a faster implementation process. As a leading Mobile Solution provider for utilities the new standards allow Clevest to expand our developments to interface with other standardized solutions. Thus we can offer a much better and more complete solution to our customers.”

“Clevest is a great supporter of the MultiSpeak Specification, as evidenced by their development and interoperability testing of standardized MultiSpeak interfaces, as well as their active participation in past technical conferences. Hosting this meeting also indicates that Clevest extends that support to the important work of enhancing and maintaining the specification as well”, said Gary McNaughton, VP of Cornice Engineering, Inc. and MultiSpeak Technical Coordinator.

The Multispeak technical conference will extend over a 3 day period, where attendees meet to advance standards for software interfaces and standardized solutions for utilities.

### About Clevest Solutions Inc.:

Clevest provides the most complete and flexible end-to-end Mobile Field Force management solutions in the utilities industry. Clevest’s application suite provides modular tools that include Dispatch, Scheduling, AVL, In-vehicle Navigation, Mobile, and a patent pending Configuration tool. The company’s applications integrate the latest innovations in software, wireless technologies, geospatial information and mobile devices to get jobs done faster, safer, and increase efficiency and reliability.
