

Clevest Mobile GIS

PLATINUM

Optimize network assessment processes by automating asset inspections with map-centric digital workflows

Key Benefits of Clevest Mobile GIS - PLATINUM

Pre-integrated with Esri's technology stack, the Platinum edition provides:

Network assessment features for field inspections of utility assets: Efficiently meet and report on compliance targets

Support for multi-worker assignments: Segment large inspections into orders for multiple workers

Map-based view of assessment status: Track progress of network assessments in real-time

Redline and annotation capabilities: Capture corrections and notes in real time with other stakeholders and third party systems to improve field safety, collaboration, and operational efficiency

Related product lines:

- Mobile Workforce Management
- Location Solutions
- Advanced Network Deployment
- Meter Reading

Avoid fines and improve visibility, collaboration, compliance, and reporting of asset inspections by optimizing network assessment activities and programs with the automated map-based workflows in Clevest Mobile GIS – Platinum.

Utilities are required to periodically assess all assets in the field for safety and reliability. This work is time-consuming and often relies on inefficient paper maps to assign and track inspections. For some utilities, this creates a challenge to meet and report on compliance targets with little to no visibility into which assets have been assessed as on schedule and which are remaining to be completed.

How it Works

The Platinum edition provides a set of features and configurable workflows to support a variety of complex asset-related inspection work such as:

- Damage assessments
- Leak surveys
- Asset inspections
- Vegetation management

Utilities can easily create and assign assessments to one or more field workers, and break large asset assessments into smaller segments to complete work more quickly and efficiently.

Dispatchers and managers have unprecedented visibility into the status of inspections and can see at-a-glance what assets have been assessed, what is remaining, and what follow-up work is required for assets that failed inspection.

Assessment information from all order segments is collated into the master order so that all assigned workers – as well as dispatchers and managers – can visualize progress, remaining work, and areas for troubleshooting.

Automate your workforce today with platinum features such as:

- Network assessment orders
- Monitor and track network assessment progress
- Visualize multiple network assessment orders in WorkSpace

Query assets

- Monitor assessment progress
- Segment large asset assessments
- Optimize network assessments
- Leverage geospatial awareness
- Visualize asset infrastructure
- Access Esri basemaps
- Improve safety
- Enhance visibility
- Encourage collaboration
- Meet compliance

Create/share redlines

- Streamline assessments
- Run network traces
- Capture field asset edits
- Work online and offline
- Map-centric workflows
- Leverage geospatial awareness
- Visualize asset infrastructure
- Improve safety
- Enhance visibility
- Encourage collaboration

Monitor progress in the office on active programs in the field as assessment inspections and line patrols are completed.

Why Clevest Mobile GIS?

In addition to the visibility and asset maintenance capabilities provided by the Standard and Premium editions, utilities can leverage Clevest Mobile GIS – Platinum to optimize network assessment by automating and streamlining asset field assessments, and gaining visibility across the organization into assessment schedules and progress.

As mobile needs grow, utilities that partner with Clevest can expand their enterprise-grade mobility platform by adding Clevest Mobile Workforce Management, Location Solutions, Advanced Network Deployment, Meter Reading and more to the Mobile GIS deployment.

Utilities can seamlessly integrate the Platinum edition with any version of Clevest Mobile Workforce Management to further drive operating efficiencies and benefits.
