

Clevest Add-On Component for SAP

Increase ROI and reduce time to deploy with our SAP-certified solutions

Infosheet

Many of our customers rely on SAP technology to support multiple functions within their organization. However, out-of-the-box capabilities are often not enough. Today, most energy and water utilities rely on a constant exchange of data between multiple applications so they can monitor their operation and coordinate people and equipment in the field.

Extending the value of your SAP deployment to deliver additional functionality to the field can be very complex and costly. The Clevest Add-On Component (AOC) for SAP provides our customers with a simple and cost-effective option.

Clevest AOC is much more than a basic integration. Acting as the central data exchange hub, Clevest coordinates data and interactions from all active sources to optimize SAP notifications, service orders, timesheets, job costing, and more.

With our standards-based approach, IT departments can easily install, configure, support, and maintain the Clevest AOC, including straightforward adaptations for customizations that originate on the SAP side.

How it works

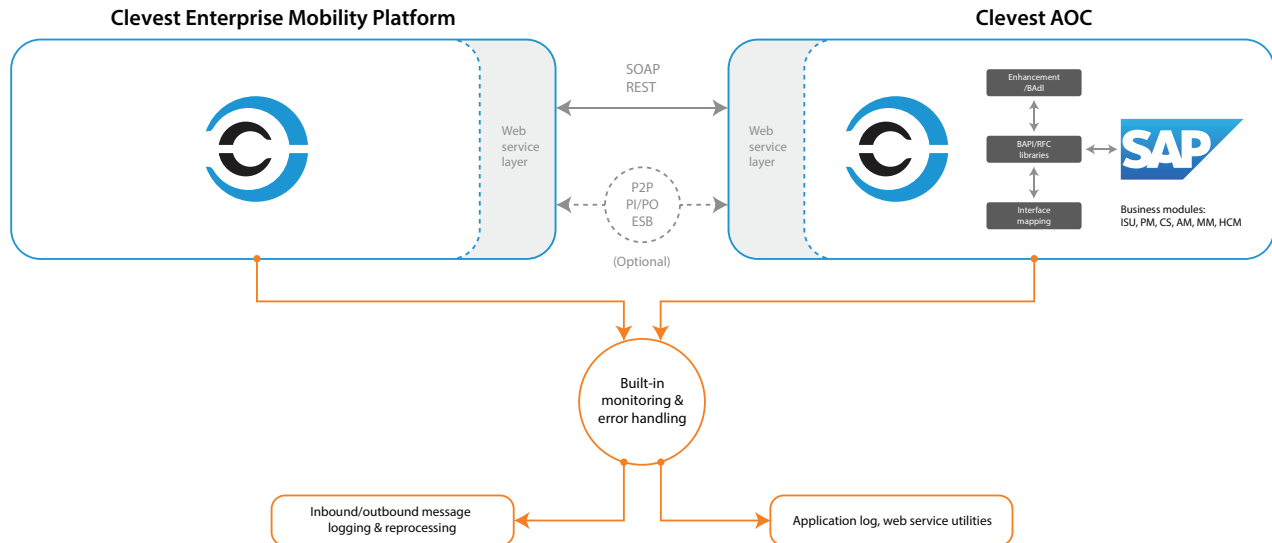

Clevest AOC is an extension of the Clevest Mobile Workforce Management offering. It supports a deeper integration across multiple SAP functions including SAP IS-U/PM, Logistics, Finance, and HR modules. The flexible architecture is HANA-ready and can be used within point-to-point, PI/PO, and ESB environments.

The solution allows you to reliably exchange data using a standards-based framework for application-to-application integration. You'll be able to easily extend interface mapping and business logic for customer and SAP objects using the AOC Business Add Ins (BADI). The Clevest AOC also supports the processing of events-based messaging.

The Clevest AOC is highly configurable with web services based on the SAP Business Application Programming Interface (BAPI). Built-in exception handling is also included so that issues can be resolved as they arise.

SAP® Certified
Powered by SAP NetWeaver®

Industry-leading best practices

We've spent decades working exclusively with energy and water utility companies. Over the years, we've helped develop and define best practices in this field. One benefit for our customers is our extensive library of best practice templates that expedite the automation of end-to-end processes.

To achieve greater efficiencies, these optional modules are available to Clevest AOC customers:

SAP Service Order Templates

Manage SAP-generated service orders:

- Receive / create / modify orders
- Historical and pending notifications
- Scheduling and dispatch
- Route optimization
- Order status updates
- Intelligent workflows
- GIS integration

SAP Timesheet & Job Costing Templates

Easily capture timesheet records:

- Automatically capture timesheet records based on order activity
- Add / edit timesheet records
- Submit to SAP for processing
- Automatically capture job cost data (labor, materials, vehicle and equipment utilization)
